

Week 6.10 - 10.10

- Class ResonanceZone
 - continued the *Area* function
 - added a function *contour*
 - added a function *flux_approx_SL*
- Function test on a numerical example (3/2 MB perturbation)

- Tested the ResonanceZone functions on an experimental doublet field
- Corrections in *AxisymmetricCylindricalGridField*

*To do: -try to use the class on a Stellerator config
- working on the TCV induced error field*

$$\begin{aligned}\phi_{SL} &= 0.0024 \quad T \cdot m^2 \\ \phi_{MP} &= 0.0027 \quad T \cdot m^2 \\ \phi_{Meiss} &= 0.0018 \quad T \cdot m^2\end{aligned}$$
