

Week 13.10 - 17.10

lecture:

- *Measurement of the magnetic field errors on TCV*
F.Piras et al, EPFL. 2010

coding:

- getting familiar with C.Heiss scripts for error field computation
- add error field to a Jellyfish configuration
- plotting Liouge, poincaré non-perturbed, poincaré perturbed for a jellyfish configuration

to do:

- overplot Liuge and poincaré (use Liuge on python)
- understand and rewrite C.Heiss script for computing error field
- compare the error field computation “Stray shot” vs “backoff shot”
- compare plots with MANTIS diagnostics (and other ?)
- test it with other configurations (Snowflakes)
