

Week 1.12 - 5.12

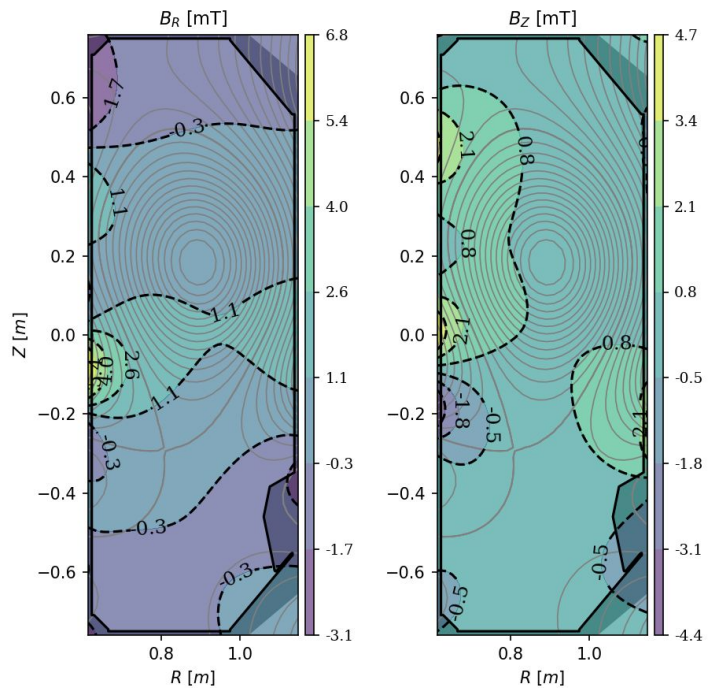

- continue writing and making final plots
- conclusion about the matrix method: no use of the Magnetic probes

saddle vs (saddle + Magnetic probes) fitting (backoff 78000)

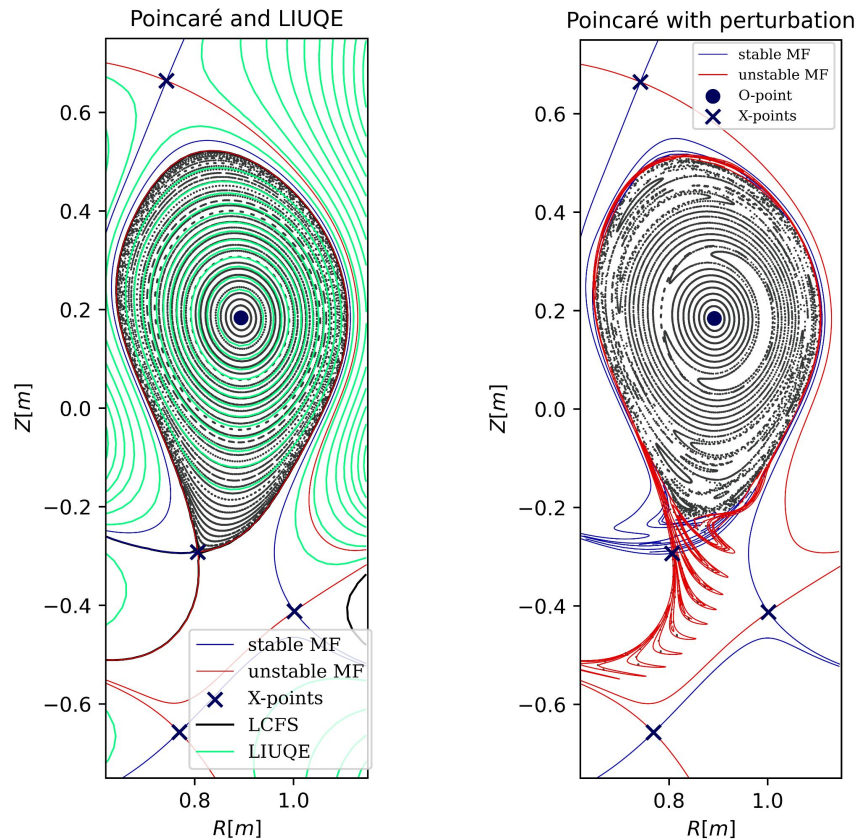

comparison 4 different shot sample (only saddle):
backoff 83000 shows different result (red cross)

$n=1$ coil displ. errorfield induced
magnetic field perturbation

to do:

- write my master's thesis, re-do displacement calculation chapter
- Get fastcam image
- Compute manifold for X-point target and shot 61'848
