

Week 17.11 - 21.11

- Met with Simon to discuss LIUQE
- compute manifolds with Kinetic reconstruction
- compute convolution of MANTIS angle of view with manifold
- compute manifold with contribution of the
- separatrix -> strike point current magnetic field
- write a little bit 1 page

to do:

- write my master's thesis
- compute trace of fixed point in “legged” vs “non legged” shots
- compute LIUQE without non-axisymmetry component
- make a 1-D line intercepting manifold/legs -> show periodicity doesn't match
